

VCO Sign™

A faster, simpler way to get secure electronic signatures for all your documents.

Acris Technology | Your virtual corporate office in the cloud.

VCO Sign is a digital electronic signature solution, fully integrated for a paperless office. No more printing, faxing or expensive FedEx® packages. Add digital signatures to your contracts and important documents and use the power of technology to track who signed which document and when, in minutes, not days! Users and customers can access pending documents in real time to manage the digital signature environment.

Turbocharge your document signing process!

Fast!

Substantially reduce document prep and signing time and close more deals in less time!

Easy to Use

Generate documents, position signature blocks, and upload for easy customer access

Secure

Public key encryption and secure customer access portal unique to each account

Efficient

Long-term electronic storage of all signed documents

Accessible

Users and customers can log in and use from any web-enabled platform

Accurate

Reduce or eliminate signing mistakes

Trusted

Optional PGP TrustCenter-verified certificate attached to signed documents

Compatible

Transfer of digitally signed legal documents to certified eVaulting partners

VCO Sign's Secure Digital Technology

VCO Sign is a true digital signature, based on public key asymmetric cryptography, which ensures your signed document is tamper-proof. The signer's digital identity is encrypted within the signature. Any attempt to modify a digitally encrypted VCO Sign document would visibly invalidate the document. In fact, a VCO Sign digital signature offers higher integrity than the signer's handwritten signature. VCO Sign provides non-repudiation, which means that in a dispute, the signer cannot successfully claim they did not sign a document in which their digital signature is contained.

Getting a signature has never been easier!

Enter your secured digital signature here.
